

## Market Report - **September 2016**

### **Garlic Oil Chinese Natural**

*The quantity of the crop less than last year,as the crop be hit by a natural adversity,but the quality of the crop is good.The current price of the crop is too expensive(about 12rmb/kg),so the current production cost is higher than current garlic oil price,this caused it can not make production this year.*

*We doubt if can make some production in 2017(it seems just can make small quantity production,even can make small production,it still can not meet market quantity requirement,also the production cost will not low). Also the quantity of old stock oil is hardly to find, so we advise you to buy now. We believe the price still with a rising trends as the garlic oil is too lack now.*
